AutoMate V2.8

Overview

TSO panel based front-end tool for AutoMan

Presented as a series of Panels and Menus that:

- Are simple to understand, easy to use.
- Have consistent format and behavior.
- Have instant help available.

Maintains job and task schedules as:

- Lists.
- Tables.
- Calendars.

Maintains information about events, and responses to them:

- Routine, expected events
- Error conditions.

Maintains Command Lists.

- named grouping of commands and logic that can be invoked when needed.
- may contain any valid command, order or logic statements.
- can be treated as subroutines or subtasks.

Extracts information from the Operator Log Stream about past activity and builds a base for scheduling and event automation.

Enables logical processing to be applied to messages, jobs and tasks.

Generates AutoMan GAL scripts.

Invokes the GALCOMP compiler to compile and verify scripts.

Issues commands and orders to AutoMan to alter the operating environment.

AutoMate is simple to install, and can be up and running in minutes..
