TapeMan V2.0

July 17, 2009

TapeMan V2 for z/OS is now available for download from the TapeMan downloads page. This premium package controls the allocation of tape devices and tape library mounts over multiple systems and sysplexes. This product ensures that no job ever fails for tape device contention, or because of allocation recovery for a tape device.

This product is controlled by a powerful set of parameters that tailor its behavior to the installations requirements.

This product is fully supported both during evaluation and after installation.

To obtain this software and the documentation, sign on to the download server, using your email address and navigate to the TapeMan download pages. The software and the documentation are delivered in separate packages which are kept on two separate pages. Both the software and the documentation are required for successful installation.
